

# Native Maple Species

## Freeman's Maple

*Acer x freemanii*

A naturally occurring hybrid  
*Acer rubrum* x *Acer saccharinum*

### Freeman's Maple

is a naturally occurring hybrid of red and silver maple and combines some of the best features of both parents: solid structure, upright form, showy fall colour (from the red maple) and adaptability and rapid growth (from the silver maple).

Freeman's Maple leaves have 5 lobes, tend to take on the characteristics of either of the parent species and have notches less wide than silver maple but larger and deeper than that of red maple. Serration along the leaf margins is more similar to that of silver maple than red.

It has bright yellow and orange-red fall colour. Leaves will sometimes appear blotchy with red and yellow and orange on the same leaf.

the most common **Cultivars** of  
*Acer x freemanii*
